

SAVELANG.ORG

UNIVERSAL DICTIONARY OF INDIGENOUS LANGUAGES

Based on Blockchain technology

PROBLEM

It's estimated there are over 7,000 languages in the world today, but many are endangered. Almost 3,000 could soon disappear, according to the UNESCO

SOLUTION

SAVELANG.ORG

We believe that indigenous language speakers are the best teachers. We find people who speak indigenous languages. They create content. The others validate content. To ensure information security and credibility we use blockchain to validate and store data.

HOW IT WORKS

SHARED

The platform powered by native and fluent speakers. Sharing meanings of words and phrases through text and voice.

CONSENSUAL

The validation of words and phrases is done through fluent and native speakers of indigenous languages.

FOREVER

The information is confirmed and stored through blockchain technology.
